RRNC Introduction

Rough-in of Radon Control Components in New Construction of 1 & 2 Family Dwellings and Townhouses

Scope Summary

This standard provides minimum requirements for the rough-in of radon control system components in new dwelling units under construction. This standard is harmonized with ANSI/AARST CCAH, which additionally addresses requirements for verifying if radon concentrations are below the national action level and, if required, activation of radon control systems.

Significance of Use

This standard was developed to respond to the threat of cancer caused by radon gas in homes. Radon is the leading cause of lung cancer among nonsmokers and the second leading cause of lung cancer in the general population.¹ Most people receive their greatest exposure to radon in their homes. Radon in U.S. homes causes approximately 21,000 lung cancer deaths each year.² Be it at home, work or school, an individual's exposure to radon gas combines over time to increase the risk of preventable lung cancer.

Designation of this standard: RRNC

As used for catalogue identification, "RRNC" stands for Radon Rough-in for New Construction.

The Consensus Process and Continuous Maintenance

The consensus process developed for the AARST Consortium on National Radon Standards and as accredited to meet essential requirements for American National Standards by the American National Standards Institute (ANSI) has been applied throughout the process of approving this document.

This standard is under continuous maintenance by the AARST Consortium on National Radon Standards a program has been established for regular publication of addenda or revisions, including procedures for timely consensus action on requests for change to any part of the standard.

User Tools: User tools are posted online (<https://standards.aarst.org/public-review/>) as they become available such as interpretations and approved addenda updates across time.

Rough-in of Radon Control Components in New Construction of One- and Two-Family Dwellings and Townhouses

SECTION 101 GENERAL

101.1 Purpose.

The purposes of this standard shall be as follows:

- 1) This standard is intended to regulate the design and construction of buildings to facilitate the removal of radon gas.
- 2) To provide minimum requirements for the *rough-in of radon control system* components in new *dwelling* units under construction.
- 3) To provide requirements for adoption by states and local jurisdictions.

101.2 Scope.

This standard shall be applicable only to in newly constructed one- and two-family dwellings and townhouses.

SECTION 102 LIMITATIONS

102.1 General.

The requirements of this standard shall have limitations as indicated in Sections 102.1.1 through 102.1.3.

102.1.1 Radon Testing.

Testing to determine the actual *radon* levels in the structure is outside the scope of this standard. The application of the rough-in requirements of this standard does not guarantee that the *National Action Level (NAL)* or any other specific indoor *radon* concentration will be attained.

102.1.2 Soil-borne radon.

The requirements of this standard address only soil-borne *radon*. *Radon* from other sources such as water and building materials are not addressed.

102.1.3 Soil testing.

This standard does not require or provide guidance for soil testing or analyzing the *radon* potential of a building site prior to construction of the building.
