American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer. Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution. The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he/she has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards. The American National Standards Institute does not develop standards and will in no circumstance give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretation should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This Foreword is not a part of American National Standard Z490.1 – 2009.)

The charter of the American National Standards Committee Z490 on Criteria for Accepted Practices in Safety, Health and Environmental Training was accredited by the American National Standards Institute on April 1, 1998. This Standard grew out of the recognized need for improvement in safety, health, and environmental training. Quality training is required to ensure that workers and safety, health, and environmental professionals have the knowledge, skills, and abilities necessary to protect themselves and others in the workplace.

Safety, health, and environmental training is an important element of an effective overall safety, health, and environmental program.

Historically, safety, health, and environmental training has been specifically addressed by only a few regulations with limited scope, such as asbestos, hazard communication, and storm water management. The regulations usually specify the technical topics to be covered in a training course, but do not stipulate how to adequately design, develop, deliver, and evaluate training.

This Standard covers all facets of training, including training development, delivery, evaluation, and management of training and training programs. Thus, the criteria were developed by combining accepted practices in the training industry with those in the safety, health, and environmental industries. The Standard is intended to apply to a broad range of training and training programs.

Industry employers may use this Standard to assess the services of external training providers or to audit or improve their own corporate training programs. Training providers may use the Standard to assess and improve their training services. This Standard may also be used as a basis for development and management of training and training programs, with the annexes and references providing additional information and detail.

Governmental regulations specify mandatory requirements for various safety, health, and environmental training. Likewise, the training program may be embedded in a larger safety, human resources, or other organizational structure. As a broad-based voluntary consensus standard, this document complements the regulations and organizational policies. However, compliance with this Standard does not ensure compliance with governmental regulations or organizational policies, or vice versa.

The Z490 Committee solicits public input that may suggest revisions to the Standard. Such input should be sent to the Secretariat, American Society of Safety Engineers, 1800 East Oakton Street, Des Plaines, IL 60018-2187.

This Standard was developed and approved for submittal to ANSI by the American National Standards Committee on Criteria for Accepted Practices in Safety, Health, and Environmental Training, Z490. Committee approval of the Standard does not imply that all members voted for its approval. At the time of its approval, the Z490 Standards Committee consisted of the following members:

Steven F. Kane, P.E., CSP, CET, CIT, Chairperson
 Frank Perry, P.E., CSP, Vice Chairperson
 Timothy R. Fisher, CSP, CHMM, ARM, CPEA, Secretary
 Dewey Whitmire, Assistant Secretary
 Jennie Dalesandro, Administrative Technical Support

Organization Represented

Name of Representative

Academy of Certified Hazardous Materials Managers	Janet Kerley, CHMM Reggie Suga, CHMM
American Association of Occupational Health Nurses	Wendie Robbins Susan Randolph
American Industrial Hygiene Association	Susan Marie Viet, Ph.D., CIH Karin Wetzel, MSPH, CIH

Explanation of Standard

American National Standard Z490.1 uses a two-column format to provide both specific requirements and supporting information.

The left column, designated "Standard Requirements," is confined solely to these requirements. The right column, designated "Explanatory Information," contains information that is intended to clarify the Standard. This column is not a part of the Standard.

Page Intentionally Left Blank.

**AMERICAN NATIONAL STANDARD Z490.1
CRITERIA FOR ACCEPTED PRACTICES IN
SAFETY, HEALTH, AND ENVIRONMENTAL TRAINING**

STANDARD REQUIREMENTS

EXPLANATORY INFORMATION

*(Not part of American National
Standard Z490.1)*

**1. SCOPE, PURPOSE, AND APPLI-
CATION**

1.1 Scope. This standard establishes criteria for safety, health, and environmental training programs, including development, delivery, evaluation and program management.

1.2 Purpose. The purpose of this standard is to provide accepted practices for safety, health, and environmental training programs.

1.3 Application. This standard is recommended for application by training providers of safety, health, and environmental training.

1.3.1 If any of the provisions of this standard are deemed to not be applicable, the other requirements or recommendations of the Standard shall still apply.

1.3.2 This standard applies to all safety, health, or environmental training, whether separate or a portion of other training.

2. DEFINITIONS

2.1 Certificate. A written document attesting to the successful completion of a training event by an individual trainee.

2.2 Competent Training Professional. A person prepared by education, training, or experience to develop and implement various elements of a training program. Also known in the standard as a Training Professional.
