Specification for radio disturbance and immunity measuring apparatus and methods

Part 1-6: Radio disturbance and immunity measuring apparatus — EMC antenna calibration
This British Standard is the UK implementation of EN 55016-1-6:2015. It is identical to CISPR 16-1-6:2014.

The UK participation in its preparation was entrusted by Technical Committee GEL/210, EMC - Policy committee, to Subcommittee GEL/210/12, EMC basic, generic and low frequency phenomena Standardization.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Specification for radio disturbance and immunity measuring apparatus and methods -
Part 1-6: Radio disturbance and immunity measuring apparatus -
EMC antenna calibration
(CISPR 16-1-6:2014)

This European Standard was approved by CENELEC on 2015-01-21. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Ref. No. EN 55016-1-6:2015 E
The text of document CISPR/A/1087/FDIS, future edition 1 of CISPR 16-1-6, prepared by CISPR SC A “Radiointerference measurements and statistical methods” was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 55016-1-6:2015.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2015-10-21
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2018-01-21

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

**Endorsement notice**

The text of the International Standard CISPR 16-1-6:2014 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

- CISPR 16-1-1:2010 NOTE Harmonized as EN 55016-1-1:2010 (not modified).
- CISPR 16-4-2:2011 NOTE Harmonized as EN 55016-4-2:2011 (not modified).
Normative references to international publications with their corresponding European publications

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 When an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: www.cenelec.eu

CONTENTS
1 Scope .................................................................................................................. 12
2 Normative references ......................................................................................... 12
3 Terms, definitions and abbreviations ................................................................. 13
  3.1 Terms and definitions ...................................................................................... 13
    3.1.1 Antenna terms ............................................................................................ 13
    3.1.2 Antenna factor terms .................................................................................. 16
    3.1.3 Measurement site terms .............................................................................. 17
    3.1.4 Other terms .................................................................................................. 18
  3.2 Abbreviations .................................................................................................. 19
4 Fundamental concepts .......................................................................................... 20
  4.1 General ............................................................................................................. 20
  4.2 The concept of antenna factor ......................................................................... 20
  4.3 Calibration methods for 30 MHz and above .................................................... 21
    4.3.1 General ........................................................................................................ 21
    4.3.2 Antenna minimum separation distances .................................................... 21
    4.3.3 General considerations for the TAM ......................................................... 21
    4.3.4 General considerations for the SSM ......................................................... 21
    4.3.5 General considerations for the SAM ......................................................... 22
  4.4 Measurement uncertainties for antenna calibration measurement results ........ 22
  4.5 Summary of methods of measurement to obtain AF ...................................... 23
5 Calibration methods for the frequency range 9 kHz to 30 MHz ..................... 25
  5.1 Calibration of monopole antennas ................................................................ 25
    5.1.1 General ....................................................................................................... 25
    5.1.2 Calibration by the ECSM .......................................................................... 26
  5.2 Calibration of loop antennas .......................................................................... 32
    5.2.1 General ....................................................................................................... 32
    5.2.2 TEM (Crawford) cell method .................................................................... 32
6 Frequencies, equipment and functional checks for calibrations at or above 30 MHz .................................................................................................................. 35
  6.1 Calibration frequencies ................................................................................... 35
    6.1.1 Calibration frequency ranges and increments ......................................... 35
    6.1.2 Transition frequency for hybrid antennas ............................................... 36
  6.2 Measurement instrumentation requirements for antenna calibrations ............ 37
    6.2.1 Equipment types ........................................................................................ 37
    6.2.2 Mismatch .................................................................................................... 38
    6.2.3 Dynamic range and reproducibility of SIL measurement ....................... 40
    6.2.4 Signal-to-noise ratio .................................................................................. 40
    6.2.5 Antenna masts and cables ....................................................................... 41
  6.3 Functional checks of an AUC ......................................................................... 41
    6.3.1 General ....................................................................................................... 41
    6.3.2 Balance of an antenna .............................................................................. 41
    6.3.3 Cross-polar performance of an antenna .................................................. 41
    6.3.4 Radiation patterns of an antenna .............................................................. 42
7 Basic parameters and equations common to antenna calibration methods for frequencies above 30 MHz .................................................................................................. 43
  7.1 Summary of methods for measurements to obtain AF .................................. 43
